CASE STUDY

Leading Healthcare Provider Saves 50% in User Access Review Hours

CHALLENGE

The client's manual user access review process was causing significant compliance issues due to a lack of accuracy in reporting. It was also reliant on tedious follow-ups that strained their team and created a multitude of security vulnerabilities, as they were individually tracking down those required for the UAR. They sought out a tool that could be more accurate, save time, and decrease the risk of terminated user access.

SOLUTION

After evaluating a number of identity governance solutions, the client decided to choose SecurEnds due to the simplicity of use, rapid deployment, and focus on user access reviews compared to the complex, expensive, and high-maintenance IAM products on the market. The advanced reporting capabilities also played a key factor in their final decision.

Using SecurEnds' automation platform, the security team was able to successfully move away from spreadsheets and manual follow-ups to cut labor hours by half, achieve compliance, and reduce data breach risk.

ABOUT CLIENT

A large provider of healthcare services to Medicare plan-based individuals, the client was relying on manual spreadsheets for user access reviews which posed major risks for HIPAA compliance and placed a time-consuming burden on their team.

SECUR·ENDS

"The experience of using SecurEnds to take our user access reviews from manual to automated was seamless."

Director of Security Infrastructure Operations

AUTOMATED VS. MANUAL

SECURENDS BENEFITS

50%
Reduction in time required to conduct user access reviews

Mitigate risk caused by human error with automated reporting tools

Increase productivity while relieving the stress of meeting audit requirements

ABOUT SECURENDS

SecurEnds' holistic governance platform enables organizations like yours to gain security and compliance visibility with a single unified view across all applications and platforms – both in the cloud and on premises – to fortify security posture, easily provide proof of compliance, and ultimately reduce audit fatigue. As critical data crosses organizational boundaries, SecurEnds gives you answers to "Who has access to what?" and "What are our security risks?"
